Abstract Letter input speed of the present cellular phone is slower because of only using one thumb. In case of the cellular phone which is provided with one joy-stick, two shift keys and 26 keys like this invention, since each alphabet of 26 letters can be inputted without a change of any shift key etc. by one striking operation of any one finger when using ten fingers of both hands and holding it with both hands, letter input speed becomes super-high speed compared with using one thumb. A new innovatory field as a communication means of the cellular phone will open, and users become convenient sharply.
